Patients with suspected heart failure (HF) should have their NTproBNP checked and referred directly to the HF team, if appropriate.

Requests for echo for suspected HF will not be performed, and requests will be returned to the referrer, resulting in delays for the patient.

If concerned, please refer patients with confirmed heart failure who are under the care of a specialist heart failure team to this team rather than for open access echo.

Indications for echocardiography

| | |
|---------------------------------------|---|
| Abnormal ECG | Murmur and no symptoms |
| Atrial fibrillation and age <65 years | Murmur plus symptoms suggestive of valve disease (exertional breathlessness, chest pain, dizziness) |
| Hypertension | |
| Urgent symptoms (describe) | |
| Other (describe) | |

Accessible information needs (AIS)

Please note that we no longer accept referrals by fax.
