

Managing your sickle cell pain at home

Information for parents/carers and young people

Whether you're a parent, carer or young person, this leaflet for managing sickle cell pain at home will help you understand and handle different types of pain effectively.

Parents may prefer to read the leaflet themselves first and take time to understand the information before explaining it to their younger children.

While this leaflet provides valuable information, it's important to consult with your healthcare provider before making any changes to your pain management plan.

If you have any queries or concerns, please do not hesitate to speak to one of the healthcare team.

What is sickle cell pain management?

Managing your pain at home means knowing different ways to measure it and using methods other than medication to ease it. This leaflet gives you tips on how to manage pain effectively if you have sickle cell disease.

Why do I need this leaflet?

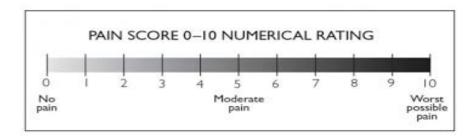

The aim is to assist you in better managing sickle cell pain. It provides tools to assess pain and non-drug methods to lessen it. Proper pain management can help prevent increased discomfort and complications.

It will provide information on:

- Using non-pharmacological methods to relieve pain.
- How you can accurately measure how much pain you're in.
- Improve communication with your healthcare team.

Types of pain and intensity

Understanding how pain feels and how strong it is helps us manage it better. Below are different ways to describe your pain — you don't need to use more than one, it's important to keep using the same one that fits the child's or young person's age group.

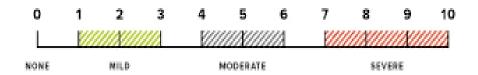

Numerical scale:

- Suitable from 7 years old plus. The numerical scale allows you to rate your pain on a scale from 0 to 10, where:
- > 0: Represents no pain.
- 10: Represents the worst pain imaginable.

This scale helps you and your healthcare team understand how bad your pain is. It is important to be honest when rating your pain so you can get the right care.

0-10 NUMERIC PAIN RATING SCALE

Coloured numerical pain scale:

Suitable from 7years+. This scale uses colours to show how intense your pain is. Each colour stands for a range of numbers (for example, green for mild pain, yellow for moderate pain, and red for severe pain). This can be especially useful for children or those who find it easier to understand pain levels through colours.

Wong baker faces scale:

➤ Designed for children (3 years+) and young people who have difficulty expressing pain with words, the Wong-Baker Faces Scale uses a series of faces ranging from smiling to crying. Patients pick the face that best shows how they feel.

Brief pain inventory

For children aged 12 and over. This short form helps understand how much pain your child is feeling and how it affects their daily life, like sleep, mood, or activities.

Non-pharmacological routes

Sometimes, simple methods can really help with sickle cell pain with or without needing medication. Here are some effective techniques you can try:

1. Heat packs / Hot water bottle

- Applying heat can soothe pain and relax tense muscles.
- Use a heat pack or a hot water bottle wrapped in a towel on the painful area. Heat increases blood flow and can help ease discomfort.

Why cold packs are **NOT** recommended

Using cold packs can create an environment that increases sickling of red blood cells. This can block small and large blood vessels, leading to reduced blood flow. Ultimately, this can cause tissue damage and serious complications in the affected limb.

2. Warm bath

Taking a warm bath is not only relaxing but can also provide relief from pain. The warmth of the water helps to loosen muscles and joints, reducing the intensity of pain.

2. TENS machines (Transcutaneous Electrical Nerve Stimulation):

TENS machines work by sending tiny electrical pulses through pads on your skin. These pulses can help lessen pain signals going to your brain and give you something else to focus on instead of the discomfort.

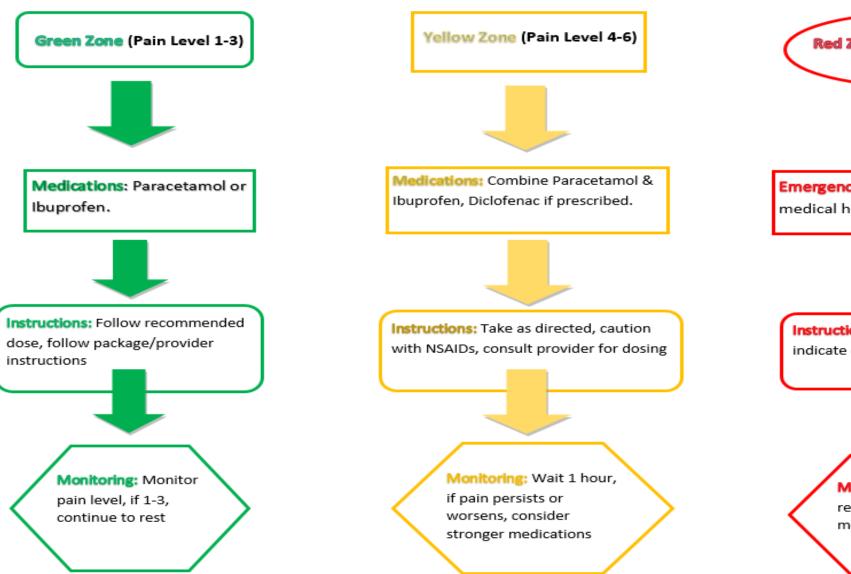

4. Gentle massage

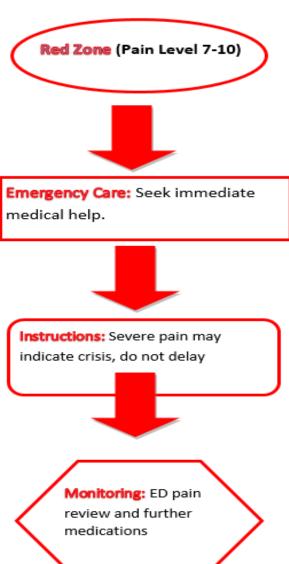

Massaging the sore area with gentle, circular motions can relax muscles and boost blood flow. Use a moisturising lotion or oil to reduce friction and make the massage more soothing.

5. Distraction

Doing things that hold your interest can help take your mind off the pain. Try activities like playing games, solving puzzles, drawing, or doing crafts. This distraction can be especially useful for handling mild to moderate pain.

Pharmacological Routes

Who to contact?

Haematology Clinical Nurse Specialists Tel: **020 3299 1916** or **020 3299 4752**

MyChart

Our MyChart app and website lets you securely access parts of your health record with us, giving you more control over your care. To sign up or for help, call us on 020 3299 4618 or email kings.mychart@nhs.net. Visit www.kch.nhs.uk/mychart to find out more.

Sharing your information

King's College Hospital NHS Foundation Trust has partnered with Guy's and St Thomas' NHS Foundation Trust through the King's Health Partners Academic Health Sciences Centre. We are working together to give our patients the best possible care, so you might find we invite you for appointments at Guy's or St Thomas' hospitals. King's College Hospital and Guy's and St Thomas' NHS Foundation Trusts share an electronic patient record system, which means information about your health record can be accessed safely and securely by health and care staff at both Trusts. For more information visit www.kch.nhs.uk.

Care provided by students

We provide clinical training where our students get practical experience by treating patients. Please tell your doctor or nurse if you do not want students to be involved in your care. Your treatment will not be affected by your decision.

PALS

The Patient Advice and Liaison Service (PALS) is a service that offers support, information and assistance to patients, relatives and visitors. They can also provide help and advice if you have a concern or complaint that staff have not been able to resolve for you. They can also pass on praise or thanks to our teams. The PALS office is located on the ground floor of the Hambleden Wing, near the main entrance on Bessemer Road - staff will be happy to direct you.

PALS at King's College Hospital, Denmark Hill, London SE5 9RS
